## COVID19 MANAGEMENT PLAN UPDATE JULY-AUG 2020

Current measures within my practice to minimise the risk of viral transmission:

**Physical measures:** reception screens, distancing (seats & queue), regular surface cleaning

### Consulting:

- I am continuing to accept referrals - urological problems need treatment, especially if urgent
- Patients are offered teleconsulting where possible - especially for results
- Where F2F consultation is required, safety measures include sending out information sheet, screening questionnaire at presentation, temperature checks, enforcement of masks, distancing and hand hygiene

### Surgery:

- I am continuing to undertake public and private surgery for emergency and urgent conditions (eg blocked kidney, cancers) as allowed within the DHHS and hospital restrictions
- For non-urgent conditions timing of surgery will be organised when appropriate
- I will advise patients on the risk-benefit balance for any surgery they need to have and arranging their treatment accordingly

I will provide further updates as the outbreak evolves and look forward to continuing to provide your patients with ongoing urological care

Please feel free to contact me through the office numbers or directly on my mobile or pager for any queries or urgent referrals.
